CYBERSECURITY MANAGEMENT BA/BS

The Cybersecurity Management program is designed to prepare students for industry. The Cyber Management major fuses the three components: a strong cybersecurity management base, computer programming, and business management. The curriculum is designed to be very focused on industry needs and skills. Students take courses in networking, advanced cyber security and pentesting.

The goals of the Cyber Management program is to provide students with learning experiences in both the classroom and laboratory so that they will be well-prepared to:

- · Design and implement object-oriented and imperative programs
- · Understand algorithms and data structures
- · Understand relational databases, and network development
- · Understand online safety in the context of the wider world
- · Understand the different types of malware, including viruses and trojans, network security, and cryptography
- · Identity theft and risk management
- · Students will explain the concepts, theories, and practices in the functional areas of business
- · Students will prepare professional oral and written forms of communication
- · Students will evaluate and apply information technology in support of management decision making
